

2022 Maine Shared
Community Health Needs Assessment

Somerset County

Northern Light HealthSM

COVID-19 AND OUR HEALTH

While our quantitative data pre-dates the COVID-19 pandemic, the 2021 community health needs assessment outreach took place during the pandemic, and participants noted its impacts in deep and meaningful ways. It was impossible not to recognize the pandemic's impacts on healthcare, health outcomes, behavioral health, and social support systems, especially for those who experience systemic disadvantages.

Challenges in accessing care have impacted chronic disease management and caused delays in non-emergency procedures. Rates of those seeking medical care for even acute health events such as heart attack, stroke, and uncontrolled high blood sugar were low during the early phase of the pandemic due to COVID-19 concerns. This occurred even while the use of telemedicine increased (Kendzerska, et al., 2021). Later in the pandemic, health care usage data from July 2020 through July 2021 show that increases in ICU bed occupancy were followed weeks later by a higher number of deaths not caused by COVID than typically seen before the pandemic. ICU bed occupancy had exceeded 75% of capacity nationwide for at least 12 weeks as of October 25, 2021 (French G., et al., 2021).

Previous disasters have shown that the secondary impacts on population health are long-lasting. For instance, 10 years after Hurricane Katrina, Tulane University Health Sciences Center saw a significant increase in heart disease and related risk factors such as increases in A1C levels, blood pressure, and LDL cholesterol (Fonseca, et al., 2009). The after-effects of disasters such as the Iraqi occupation in Kuwait in 1990, the London bombings in 2005, and the tidal waves and the nuclear meltdown in Fukushima, Japan in 2011 have revealed the need for immediate as well as long-term mental health care (McFarlane & Williams, 2012).

Emerging concerns on the lasting impacts of this pandemic also include the long-term effects of COVID infection as our newest chronic disease. A recent systematic review estimates that more than half of COVID-19 survivors worldwide continue to have COVID-related health problems six months after recovery from acute COVID-19 infection (Groff, et al., 2021). New evidence shows increases in adult diagnoses of diabetes, the risk for diabetes among children, and worsening diabetes among those who already had diabetes after COVID-19 infection (Barrett, et al, 2022).

There are some concerns that the pandemic has had negative impacts on health behaviors. However, the evidence is not yet clear. In Maine, newly available 2020 Maine Behavioral Risk Factors Surveillance System (BRFSS) data on a few key measures give us an early snapshot of the health of Maine adults in the first year of the pandemic. These data do not show any evidence of adverse impacts on trends in smoking, alcohol use, overweight, obesity, or physical activity. Self-reported alcohol use, binge drinking, and current smoking in 2020 were at the lowest levels since 2011 (Maine CDC, unpublished analysis). Drug overdose deaths increased by 33% in 2020 and by another estimated 23% in 2021 according to preliminary findings (Maine Attorney General's Office); it is not clear whether this is a continuation of previous trends, other factors, or due to the pandemic.

The pandemic is affecting different segments of the population more than others. The August 2021/COVID Resilience Survey showed that younger people, people of color, and those with lower incomes all had elevated stress (American Psychological Association). In Maine, Black or African Americans experience a disproportionate share of the COVID-19 burden as they are only 1.4% of Maine's total population yet, as of January 19, 2022, makeup 3.1% of cases and hospitalizations (Maine DHHS).

Thus, the findings in the 2022 Maine Shared CHNA Reports which show the most often identified priorities such as mental health, substance and alcohol use, access to care, and social determinants of health take on new meaning and an increased sense of urgency.

INTRODUCTION

The **Maine Shared Community Health Needs Assessment (Maine Shared CHNA)** is a collaboration between Central Maine Healthcare (CMHC), Maine Center for Disease Control and Prevention (Maine CDC), MaineGeneral Health (MGH), MaineHealth (MH), and Northern Light Health (NLH). The vision of the Maine Shared CHNA is to turn health data into action so that Maine will become the healthiest state in the U.S.

The mission of the Maine Shared CHNA is to:

- Create Shared CHNA Reports,
- Engage and activate communities, and
- Support data-driven health improvements for Maine people.

This is the fourth Maine Shared CHNA and the third conducted on a triennial basis. The Collaboration began with the One Maine initiative published in 2010. The project was renamed to the Shared Health Needs Assessment and Planning Process in 2015 which informed the 2016 final reports, and renamed to the Maine Shared CHNA in 2018, which informed the 2019 final reports. The 2021 community engagement cycle has informed the 2022 final reports.

New this cycle is an expanded effort to reach those who may experience systemic disadvantages and therefore experience a greater rate of health disparities. Two types of outreach were piloted in this effort. One effort included nine community sponsored events hosted by organizations representing the following communities: Black or African Americans; people who are deaf or hard of hearing; people with a mental health diagnosis; people with a disability; people who define themselves or identify as lesbian, gay, bisexual, transgender, and queer and/or questioning (LGBTQ+); people with low income; older adults; people who are homeless or formerly homeless; and youth. In addition to these events, 1,000 oral surveys were conducted in collaboration with eight ethnic-based community organizations' community health workers to better reach Maine's immigrant population. A complete description of how these efforts were deployed, as well as a listing of those who provided input, is provided in the Methodology section on page 20.

All of the County, District, and State reports and additional information and data can be found on our web page: www.mainechna.org.

EXECUTIVE SUMMARY

LEADING CAUSES OF DEATH

One way to view the top health priorities is to consider their contributions to Maine's morbidity, mortality, and overall quality of life issues. It is important to note Maine's leading causes of death to put the community-identified health priorities into perspective. This includes underlying causes of death such as tobacco use, substance and alcohol use, and obesity.

Table 1. Leading Causes of Death

RANK	MAINE	SOMERSET COUNTY
1	Cancer	Cancer
2	Heart Disease	Heart Disease
3	Unintentional Injury	Chronic Lower Respiratory Disease
4	Chronic Lower Respiratory Disease	Unintentional Injury
5	Stroke	Stroke

TOP HEALTH PRIORITIES

The people of Somerset County have identified the following health priorities.

Table 2. Top Health Priorities for Somerset County

PRIORITIES	% OF VOTES
Mental Health	69%
Social Determinants of Health	69%
Substance and Alcohol Use	52%
Access to Care	52%

Statewide, participants identified similar top four priorities in the 2021 engagement process as was in 2018.

Table 3. Top Health Priorities for County/State

PRIORITIES	2018	2021
Mental Health	✓ ●	✓ ●
Social Determinants of Health	✓ ●	✓ ●
Substance and Alcohol Use	✓ ●	✓ ●
Access to Care	●	✓ ●
Older Adult Health	✓ ●	
Physical Activity, Nutrition, and Weight	●	

✓ County Priority ● State Priority

Common themes identified by participants in 2021 include an emerging mental health crisis; challenges in access to healthcare, including mental health providers; issues related to poverty, transportation,

and other social determinants of health in a rural state; and increasing rates of substance use.

The following pages describe each of these priorities in more detail including the **major health concerns** identified by participants in the community engagement process. There is a description of community-identified resources available to address those concerns as well as any related gaps or needs. Where available, there is also information for certain groups that are at higher risk due to systemic disadvantages. Finally, following the sections that discuss each of the health priorities is a listing of other health issues that were raised by community members but were not identified as priorities.

DEMOGRAPHICS

Somerset is a rural county, with lower income and educational attainment and higher rates of those living in poverty or with a disability. A large percentage of the population is at or near retirement age.

Table 4. Selected Demographics

	COUNTY	MAINE
Population numbers	50,520	1.34M
Median household income	\$44,256	\$57,918
Unemployment rate	6.6%	5.4%
Individuals living in poverty	20.4%	11.8%
Children living in poverty	22.6%	13.8%

Table 4. Selected Demographics (continued)

	COUNTY	MAINE
65+ living alone	31.2%	29.0%
Associate's degree or higher (age 25+)	28.7%	41.9%
Gay, lesbian, and bisexual (adults)	2.4%	3.5%
Persons with a disability	21.7%	16.0%
Veterans	10.6%	9.6%

Table 5. Race/Ethnicity in Somerset County

	PERCENT	NUMBER
American Indian/Alaskan Native	0.5%	244
Asian	0.4%	194
Black/African American	0.6%	313
Native Hawaiian or other Pacific Islander	-	-
White	96.5%	48,759
Some other race	0.1%	60
Two or more races	1.9%	950
Hispanic	1.1%	554
Non-Hispanic	98.9%	49,996

Figure 1. Age distribution for Somerset County

HEALTH EQUITY

There is significant agreement between the priorities chosen during county forums and those identified through community-sponsored events and oral surveys. The underlying root causes for those who may experience systemic disadvantages differ depending on local resources and unique characteristics and cultural norms for each sub-population. These differences are best identified through further collaboration at the community level.

For a detailed look at what each community identified as priority health topics, as well as any gaps or barriers and resources or assets, please see the State Report, found on the Maine Shared CHNA website, www.mainechna.org.

For a quantitative look at how these differences affect health outcomes, see the Health Equity Data Sheets, also found on the Maine Shared CHNA website, www.mainechna.org.

NEXT STEPS

This assessment report will be used to fulfill the Internal Revenue Service (IRS) requirements for non-profit hospitals as well as the Public Health Accreditation Board (PHAB) requirements for state and local public health departments. The next steps include:

- For hospitals, create an informed implementation strategy designed to address the identified needs.
- For District Coordinating Councils, create District Health Improvement Plans.
- For the Maine CDC, create an informed State Health Improvement Plan.

This report will also be used by policymakers, non-profits, businesses, academics, and countless community partners to support strategic planning, coalition building, and grant writing. Taken together, these steps can lead to Maine becoming the healthiest state in the nation.

PRIORITY: MENTAL HEALTH

KEY TAKEAWAYS FOR SOMERSET COUNTY

Mental health was the top priority identified in Somerset County. It was also identified as a top health priority in all other counties and underserved communities across the state. Mental health includes emotional, psychological, and social well-being. It affects how we think, feel, and act. It also helps determine how we handle stress, relate to others, and make healthy choices.¹

Participants in the event hosted for those with a mental health diagnosis noted extremely long waitlists for services, highlighting a need for more high-quality mental health services. Participants also suggested the need for more case management, supportive, and wrap-around services, as those with a mental health diagnosis required varied and nuanced care and treatment.

Availability of mental health providers in Somerset County was the most frequently mentioned indicator related to mental health. Community members noted the low availability of providers in the area and limited resources available, especially for children. A lack of mental health providers was identified as the top need in Somerset County to help address mental health issues.

"I looked at all of the mental health issues and they all bother me - it affects so many things. If you are depressed, you won't do positive things."

Depression and Anxiety were the second and third most frequently mentioned among the forum participants. Recent estimates show that 11.3% of adults in Somerset County report **current symptoms of depression**, while 21.4% have experienced **depression in their lifetime**. In 2015-2017, 20.8% of adults in Somerset County reported having experienced **anxiety** in their lifetime. These rates are similar to Maine overall.

Mental health issues among youth were concerning to those in the community. In 2019, 34.5% of high school students and 23.2% of middle school students in Somerset County reported feeling sad or hopeless for two or more weeks in a row. These rates are similar to Maine overall. There were concerns about the impact of the COVID-19 pandemic on youth, including potential increases in adverse childhood experiences (ACEs) resulting from the pandemic which forced homeschooling in potentially unsafe situations while decreasing access to school-based supports.

Youth with disabilities who experience mental health issues are a particularly vulnerable population. They require access to providers who can connect and communicate in ways to meet their unique needs.

"How do we identify the priority when you are hungry or there is chaos in the home - how do we prioritize when there is so much happening for them [kids]?"

Mental health emergency department usage was the fifth concerning health indicator. The overuse or misuse of the emergency department within the county is due to limited treatment facilities/providers. The mental health emergency department rate per 10,000 population in Somerset County from 2016-2018 was 183.5. This rate was similar to the state (181.5) over that same period.

Participants mentioned community resources in to address mental health issues include several mental health programs in the area, 211 Maine and mental health training programs.

For more information about how those who may experience systemic disadvantages are impacted by this priority health topic area, please see the State CHNA Report.

Ratio of population to psychiatrists	—	2019 191,140.0	N/A	2019 12,985.0	N/A	—	N/A
Currently receiving outpatient mental health treatment (adults)	2012-2014 19.0%	2015-2017 16.2%	N/A	2015-2017 18.0%	N/A	—	N/A

CHANGE columns shows statistically significant changes in the indicator over time.	
★	means the health issue or problem is getting better over time.
!	means the health issue or problem is getting worse over time.
○	means the change was not statistically significant.
N/A	means there is not enough data to make a comparison.
BENCHMARK columns compare the county data to the state and national data.	
★	means the county is doing significantly better than the state or national average.
!	means the county is doing significantly worse than the state or national average.
○	means there is no statistically significant difference between the data points.
N/A	means there is not enough data to make a comparison.
ADDITIONAL SYMBOLS	
*	means results may be statistically unreliable due to small numbers, use caution when interpreting.
—	means data is unavailable because of lack of data or suppressed data due to a small number of respondents.

COMMUNITY RESOURCES TO ADDRESS MENTAL HEALTH

Community members identified multiple available mental health programs and the presence of youth mental health resources as assets available for the Somerset County community. The community also identified barriers to care, including a lack of mental health providers, a need for additional youth mental health services, a lack of focus on prevention, and the potentially serious consequences of untreated mental health issues as ongoing challenges Somerset County will need to overcome.

The following information was gathered from participants during a group activity. Participants were asked to share their knowledge of the gaps and needs or resources and assets in their communities regarding the identified health priorities. The numbers in parentheses indicate the number of times community members mentioned or concurred with what was listed.

Table 6. Gaps/Needs and Available Resources (Mental Health)

AVAILABLE RESOURCES	GAPS/NEEDS
<p>Treatment Northern Light Acadia Hospital (2) Acadia Hospital’s CARES (Child-Adolescent Resource and Educational Series) Telehealth access for Acadia mental health crisis patients (2) Community Health and Counseling National Alliance on Mental Illness (NAMI) Maine</p> <p>Youth Elementary and Secondary School Emergency Relief (ESSER) and American Rescue Plan (ARPA) funds available to provide Social Emotional Learning supports to youth Early childhood initiatives with Kennebec Valley Community Action Program (KVCAP) such as Maine families Increased school social workers</p> <p>Training Trauma-informed care training (4) Mental health first aid trainings (3)</p> <p>Other Services Kennebec Valley Community Action Program transportation services (4)</p>	<p>Provider Lack of providers (9)</p> <p>Inadequate Services Long wait lists (3) Lack of facilities Lack of inpatient care (2) General lack of access to mental health services (2) Lack of outpatient intervention (3)</p> <p>Barriers to Treatment Lack of transportation (7) Lack of broadband in rural communities (2) Stigma (14)</p> <p>Isolation Isolation from COVID-19 (4) Older adult isolation Social isolation No place for seniors to gather in their communities (2)</p> <p>Education/Awareness Community understanding of the effects of trauma (2) Need for more education in general Lack of awareness of people’s own mental health needs (2)</p> <p>Youth/Children Lack of resources for children leads to Emergency Department visits and long stays Lack of in-school services (2) Need for more mental health awareness in schools, e.g., healthy coping skills (2)</p> <p>Community Supports No place for seniors to gather in their communities (2)</p>

PRIORITY: SOCIAL DETERMINANTS OF HEALTH

KEY TAKEAWAYS FOR SOMERSET COUNTY

Social determinants of health were selected as a top priority in Somerset County. It was also identified as one of the top health priorities in 14 other counties in the state.

Social determinants of health are the conditions in which people live, work, learn, and play. Social determinants of health are the conditions in which people live, learn, work, play, worship, and age. Domains include education, economic stability, health care access and quality, the environment, and social connectedness. Examples include access to healthy food, housing, water, air, and relationships². Differences in social determinants can create disparities that impact vulnerable populations and rural areas like Somerset County.

Community members in Somerset County were concerned about **transportation** due to the rural nature of the County. Those without access to a personal vehicle experience barriers to healthcare and other services. There were concerns about food insecurity, especially for young people, the need for more identification/prevention around adverse childhood experiences (ACEs), and job training and opportunities to provide living wages in the area.

“Health care may be low on the list of [peoples] priorities - [they are] busy dealing with their immediate needs”

Poverty was also a frequently mentioned health indicator related to social determinants of health in Somerset County. Community members mentioned that poverty is an underlying cause and contributing factor to many health outcomes. According to recent estimates, 20.4% of individuals and 22.6% of children live in poverty in Somerset County. This is significantly higher than the state overall for both individuals (11.8%) and children (13.8%).

Adverse childhood experiences (ACEs) are a list of potentially traumatic events that occur during childhood and increase the likelihood of negative health and behavioral outcomes later in life. In 2019, 27.0% of high school students in Somerset County reported having experienced four or more adverse childhood experiences. This is significantly higher than Maine overall (21.3%).

Household income is a common concern among the Somerset County community. From 2015-2019, the median household income in Somerset County was \$44,256. This is significantly lower than Maine (\$57,918) over that same period. In 2020, the **unemployment rate** in Somerset County was 6.6%. This is similar to Maine overall (5.4%).

Community members facing systemic disadvantages can be especially impacted by social determinants of health. Individuals with disabilities are impacted by a lack of transportation and face issues of discrimination. Black or African Americans noted poverty, unemployment, and food insecurity issues. Older adults often live on limited incomes on must rely on the support of others as well as face barriers related to transportation and food insecurity.

Participants mentioned strong community cohesion and collaboration among people, programs and services, several local programs that provide food and meals as resources to address issues related to social determinants of health in Somerset County.

For more information about how those who may experience systemic disadvantages are impacted by this priority health topic area, please see the State CHNA Report.

*	means results may be statistically unreliable due to small numbers, use caution when interpreting.
—	means data is unavailable because of lack of data or suppressed data due to a small number of respondents.

COMMUNITY RESOURCES TO ADDRESS SOCIAL DETERMINANTS OF HEALTH

Somerset County community members point to several resources available that improve social determinants of health. These include many resources available to assist residents with accessing healthy foods, community cohesion, programs to improve physical health, and older adult supports. However, community members also identified several challenges related to social determinants of health, including high levels of poverty, lack of resources for housing and transportation, high levels of food insecurity, isolation and rurality, and a lack of childcare resources.

The following information was gathered from participants during a group activity. Participants were asked to share their knowledge of the gaps and needs or resources and assets in their communities regarding the identified health priorities. The numbers in parentheses indicate the number of times community members mentioned or concurred with what was listed.

PRIORITY: SUBSTANCE & ALCOHOL USE

KEY TAKEAWAYS FOR SOMERSET COUNTY

Substance and alcohol use was selected as a top priority in Somerset County. It was also identified as one of the top health priorities in all other counties in the state. Recurring use of alcohol and drugs can have significant negative impacts, including health problems, disability, and failure to meet major responsibilities at work, school, or home. Substance and alcohol use has also been linked to co-occurring mental health issues such as anxiety, depression, and attention-deficit/hyperactivity disorder (ADHD), among others.³

Community members in Somerset County expressed concerns about overuse of the emergency room due to substance use issues, the impact of vaping and tobacco use in general, the co-occurrence of substance and alcohol use and other conditions, and the impact of substance and alcohol use on youth.

“Emergency room over utilized. [It is] important due to the far spread of those affected by substance use [and it's] important to find treatment and help.”

Overdose deaths is a primary concern for substance use in Somerset County. In 2020, the rate of overdose deaths per 100,000 population in Somerset County was 25.7, a slight decrease from 31.7 in 2019. The rate in Maine overall was 37.3 in 2020, higher than Somerset County but not to a significant degree.

The **misuse of prescription drugs** was mentioned by 33% of forum participants. From 2013-2017, 0.9% of Somerset County adults had misused prescription medication. Participants also expressed concerns about **alcohol-impaired driving deaths**. The rate of alcohol-induced deaths the county was 11.0 per 100,000 residents between 2015 and 2019. This is similar to Maine overall (11.6).

Drug-affected infants were the fourth most frequently mentioned health concern related to substance and alcohol use in Somerset County. The rate of drug-affected infant reports per 1,000 births in Somerset County was 140.5 from 2018-2019. This is significantly higher than the state rate of 73.7 during the same time period.

Community members facing systemic disadvantages, including the formerly homeless or homeless, low-income adults, and the LGBTQ+ community mentioned a lack of treatment and recovery resources in the state. They noted a lack of harm-reduction programming, a need for supportive living environments, and skill-building programs for independent living.

“Opioid users need housing, substance, and mental health counseling. If we had housing, we could support individuals’ recovery.”

A common barrier to addressing substance use in Somerset County is a lack of substance use treatment providers and programs, including those that offer Medication-Assisted Treatment (MAT). However, community members identified several state and local prevention, treatment, recovery, and harm reduction programs as well as other resources in the area to address substance use.

For more information about how those who may experience systemic disadvantages are impacted by this priority health topic area, please see the State CHNA Report.

COMMUNITY RESOURCES TO ADDRESS SUBSTANCE & ALCOHOL USE

Community members in Somerset County identified peer recovery and treatment resources available as potential strengths to address substance and alcohol use in their county, along with harm reduction strategies and funding sources. Additionally, barriers to substance and alcohol use issues were identified by community members, including a lack of available prevention programs, a need for additional recovery supports widely available addictive substances, and a lack of youth resources.

The following information was gathered from participants during a group activity. Participants were asked to share their knowledge of the gaps and needs or resources and assets in their communities regarding the identified health priorities. The numbers in parentheses indicate the number of times community members mentioned or concurred with what was listed.

PRIORITY: ACCESS TO CARE

KEY TAKEAWAYS FOR SOMERSET COUNTY

Access to care was identified as a top priority in Somerset County. It was also identified as a top health priority in all other counties and underserved communities across the state. Access to care means having the timely use of health services to achieve the best possible health outcomes. It consists of four main components: availability of insurance coverage, availability of services, timeliness of access, and the health care workforce.⁴

Community members expressed concerns about misuse or overuse of the emergency room in Somerset County. There are long waitlists and a lack of providers for many types of services, but especially for mental health. There were also concerns about the lack of availability of health care workers in the county.

“Overuse of the ERs reaching crisis levels - breaking down good working relationships/overworked staff; no beds available.”

The **lack of providers** in the area and the rural nature of the county creates long travel distances to receive care as well as lengthy delays to establish care. Data shows that 36.0% of patients needed to travel **more than 30 miles from their home** for appointments in 2019. This compares to 20.0% of all primary care visits in Maine. Given these long travel distances, **transportation** was identified as a top need in Somerset County to help improve access, mentioned by 38% (16) forum participants.

Cost barriers to care was a frequently identified health concern related to access to care. In 2015-2017, 8.0% of adults in the county reported that there was a time during the last 12 months when they needed to see a doctor but could not because of the cost. This is similar to the state overall (10.6%).

A lack of health insurance was another health concern mentioned by community members. The rate of **uninsured** in Somerset County declined significantly from 12.0% in 2009-2011 to 9.4% in 2015-2019. However, during the 2015-2019 time period, the uninsured rate in the county is significantly higher than in the state (7.9).

The percentage of adults with a **visit to any primary care provider in the past year** was 75.2% in 2015-2017. Overall, 72.0% of Mainers had a visit to any primary care provider in the past year in 2015-2017. Data shows that 90.7% of adults in the county had a **usual primary care provider** during the time period between 2015-2017.

Disparate communities experience barriers related to access differently. Black or African American community members expressed concerns about representation and culturally competent care, as well as issues with health literacy. Similarly, individuals with disabilities noted a lack of provider training in care and communication with the population. Additionally, the LGBTQ+ community identified a need for primary care, behavioral health, and other providers who offer affirming care for the LGBTQ+ population.

Despite the challenges that Somerset County faces with access to care, community forum participants noted the area has strong community cohesion and community organizations, access alternatives, and other support that includes early childhood education and access.

For more information about how those who may experience systemic disadvantages are impacted by this priority health topic area, please see the State CHNA Report.

COMMUNITY RESOURCES TO ADDRESS ACCESS TO CARE

Available resources in Somerset County to address issues related to access include cohesion of the community, the presence of community organizations that increase access to care, emerging technologies, alternatives to in-office care, health care education, and a development plan for the health care workforce. Community members were also able to identify potential barriers to care. These included limited numbers of healthcare providers, a lack of specialist services, the need for transportation resources in an extremely rural area, and a lack of resources for youth healthcare.

The following information was gathered from participants during a group activity. Participants were asked to share their knowledge of the gaps and needs or resources and assets in their communities regarding the identified health priorities. The numbers in parentheses indicate the number of times community members mentioned or concurred with what was listed.

APPENDIX: METHODOLOGY

The Maine Shared CHNA is a public-private collaboration governed by a Steering Committee, which is made up of representatives of each member organization (CMHC, MGH, MH, NLH, and Maine CDC). The Steering Committee sets fiscal and operational goals that are then implemented by the Maine Shared CHNA Program Manager. Input is provided by key stakeholder groups including the Metrics Committee and the Health Equity/Community Engagement Committee.

The **Metrics Committee** is charged with creating and reviewing a common set of population/community health indicators and measures every three years. Before the 2018-2019 Maine Shared CHNA, the Metrics Committee conducted an extensive review of the data using the following criteria as a guide: 1.] describes an emerging health issue; 2.] describes one or more social determinants of health; 3.] measures an actionable issue; 4.] the issue is known to have high health and social costs; 5.] rounds out our description of population health; 6.] aligns with national health assessments (e.g.: County Health Rankings, American Health Rankings, Healthy People); 7.] data is less than 2 years old; 8.] data was included in the previous data set, or 9.] the Maine CDC analyzes the indicator in a current program. This review process was carried into the 2021-2022 Maine Shared CHNA, where the Metrics Committee also reviewed the previous data set to check for changes in data sources, potential new sources of data to round out certain topics, and to deepen Social Determinants of Health data which many of our partners have included in their work.

The **Health Equity/Community Engagement Committee** is charged with updating outreach methodology to ensure a collection of broad, diverse, and representative qualitative data from groups that are more likely to experience health disparities. To ensure these methods reflect the needs and cultural expectations this committee included representatives from a variety of Maine's ethnic-based and community-based organizations, along with representatives from public health and healthcare, and a variety of additional partners.

The 2021-2022 Maine Shared CHNA process involved three phases.

Data Analysis

The first phase of the project involved the analysis of more than 220 health indicators for the state, counties, public health districts, selected cities, and by specific demographics when available.

Data analysis was conducted by the Maine CDC and its epidemiology contractor, the University of Southern Maine with additional support from the contracted vendor, Market Decisions Research.

Community Outreach and Engagement

Community outreach and engagement for the Maine Shared CHNA included the following efforts:

- 17 County Forums (Maine)
- 9 Community Sponsored Events
- 1,000 Oral Surveys

County Forums were held in each of Maine's 16 counties, with one county, Cumberland, hosting one event in western Cumberland and one in eastern Cumberland in recognition of the differences between Greater Portland (Maine's most densely populated area) and the Lakes Region, (a more rural area). Local planning teams led by local healthcare and public health district liaisons organized and promoted these events. Participants were shown a PowerPoint presentation with relevant county data and were led through guided discussions to identify indicators of concern. Participants then voted to identify their top four health priorities. They were then asked to share their knowledge on gaps and assets available in their communities to address each of the top priorities identified.

New this cycle was an expanded effort to reach those who experience systemic disadvantages and therefore experience a greater rate of health disparities. Two types of outreach were piloted. One effort included nine community-sponsored events. The hosts were chosen for their statewide reach.

The communities included:

- Black or African American
- Homeless or formerly homeless
- LGBTQ+ community
- Older adults
- People who are deaf or hard of hearing
- People who live with a disability
- People with low income
- People with a mental health diagnosis
- Youth

These events followed the same methodology as county forums with hosts providing input on the data presentation and leading the effort to recruit participants

Oral surveys were conducted in collaboration with eight ethnic-based community organizations' (ECBO's) community health workers to better reach Maine's immigrant population. There were 1,000 surveys were conducted in either English (32%), Somali, (24%), Arabic (23%), French (8%), Spanish (5%), Lingala (3%), and other languages including Swahili, Maay Maay, Portuguese, Oromo, Eretria, Kirundi, and Amara. When asked for their countries of origin, respondents most commonly cited the United States (212), Iraq (205), Somalia (157), The Democratic Republic of Congo (81), Djibouti (70), Kenya (30), and Mexico (29).

Other countries of origin mentioned included Rwanda, Ethiopia, Angola, Syria, Guatemala, South Africa, Palestine, Puerto Rico, Morocco, Afghanistan, El Salvador, Nigeria, Canada, Burundi, Eritrea, France, Honduras, Uganda, Jamaica, Mali, Gabon, Sudan, Nicaragua, Peru, and Brazil

The survey was an adaptation of the City of Portland's Minority Health Program Survey conducted in 2009, 2011, 2014, and 2018. In 2021, a small group of stakeholders convened to adapt

this survey to meet the needs of the Maine Shared CHNA. This group included those who deployed the survey as well as other interested parties.

Groups that piloted these new outreach methods were offered stipends for their time.

Due to concerns related to COVID-19, community engagements efforts were conducted virtually except the event for the deaf or hard of hearing, which was held in a gymnasium at the Governor Baxter School for the Deaf on Mackworth Island. Oral surveys were conducted telephonically or by following current U.S. CDC COVID-19 protocols.

Community engagement was supported by John Snow, Inc. (JSI), who also conducted the initial qualitative analysis. All support materials including Data Profiles and PowerPoints were produced by Market Decisions Research.

Reporting

Initial analysis for each event and the oral surveys were reviewed by local hosts for accuracy and to ensure the information the community may find sensitive was flagged. Final CHNA reports for the state, each county, and districts were developed in the spring of 2022. Final Reports were written and produced by Market Decisions Research.

In addition to Urban, County, and Health District reports, the County, District, and State level data are also available on an [Interactive Data Portal](#). The data in the portal is arranged by health topic and provides demographic comparisons, trends over time, definitions, and information on the data sources. Visit www.mainechna.org and click on **Interactive Data** in the menu to the left. The Maine Shared CHNA website is hosted by the Maine DHHS. (www.mainechna.org).

One virtual community forum was held in Somerset County on November 16, 2021, with 42 attendees. Persons from the following organizations representing broad interests of the community who were consulted during the engagement process:

- Coburn Park Commission
- Healthy Living for ME
- Kennebec Behavioral Health (KBH)
- Maine Center for Disease Control and Prevention
- MaineGeneral Health
- Maine General Medical Center
- Northern Light Health
- Northern Light Homecare and Hospice
- Northern Light Inland Hospital
- Northern Light Sebecook Valley Hospital
- Office of Child and Family Services
- Redington Fairview General Hospital
- RSU #74
- School District
- Skowhegan Regional Chamber of Commerce
- Somerset Public Health
- Trusted Ride Certified

For a complete listing of organizations consulted for each of the 10 health equity outreach efforts, please see the Acknowledgements, page 23. The State Report, found on the Maine Shared CHNA website, www.mainechna.org, provides a full description of findings by each community-sponsored event.

ACKNOWLEDGMENTS

Funding for the Maine Shared CHNA is provided by the partnering healthcare systems with generous support from the Maine CDC and countless community partners and stakeholder groups. Additional funding was provided by the Maine Health Access Foundation and the Maine CDC to conduct additional outreach to engage those whose voices would not otherwise be distinctly heard. The Maine Shared CHNA is also supported in part by the U.S. Centers for Disease Control and Prevention (U.S. CDC) of the U.S. Department of Health and Human Services (U.S. DHHS) as part of the Preventive Health and Health Services Block Grant (awards NB01OT009343-01 & NB01OT009413-01). The contents are those of the author(s) and do not necessarily represent the official views of, nor an endorsement, by the U.S. CDC/HHS, or the U.S. Government.

The infrastructure for community-led efforts is gaining strength. We are grateful to those who put their trust in the Maine Shared Community Health Needs Assessment process. Together, the MSCHNA and each of our community hosts have strived to ensure their voices are reflected herein.

*Includes the Manager of Diversity, Equity, and Inclusion and the Maine CDC.

Months of planning were conducted by stakeholder groups including the Metrics Committee, Data Analysis Team, Community Engagement Committee, Health Equity Committee, and Local Planning teams. For a complete listing please visit the Maine Shared CHNA website [About Us](#) page. Significant analysis was conducted by epidemiologists at the Maine CDC and the University of Southern Maine's Muskie School of Public Service. Market Decisions Research provided quantitative and qualitative analysis and design and production support. John Snow, Inc. (JSI) provided methodology, community engagement, and qualitative analysis expertise and support. The oral survey was adapted from the City of Portland's Minority Health Program's survey. Special thanks to the Partnership for Children's Oral Health for their data contribution.
